

Videos

Video clips from YouTube or Vimeo can be added to the body (or body – post content) by moderators. First confirm that you have the permission to embed the video and the video has the appropriate settings.

In YouTube (or Vimeo) find the “share” option and copy the url.

In the desired wysiwyg editor window, make sure the text format is set to “Full HTML” (default is “filtered HTML”). Place the cursor where you want the video and press the “Add media” button.

Select the “Web” tab and paste the url into the empty field:

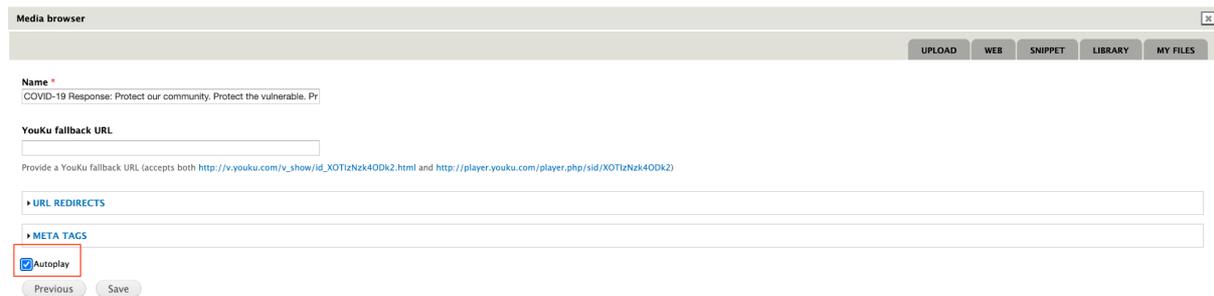

A screenshot of a "Select a file" dialog box in a wysiwyg editor. The "WEB" tab is selected. The input field contains the URL "http://youtu.be/TIMmp6XWiG0". Below the input field, there is a list of "Supported providers" including YouTube and Vimeo. At the bottom, there are "Submit" and "Cancel" buttons.

Click submit, and then submit on the next screen.

If you want editors to be able to edit around the content, remember to set the text format back to “Filtered HTML”.

Autoplay

You can set a video to autoplay when the page is loaded by selecting the check box when uploading the video. The video must be set to autoplay in YouTube or Vimeo.

The screenshot shows the 'Media browser' interface. At the top, there are navigation tabs: 'UPLOAD', 'WEB', 'SNIPPET', 'LIBRARY', and 'MY FILES'. Below the tabs, there is a 'Name' field with a red asterisk and a warning message: 'COVID-19 Response: Protect our community. Protect the vulnerable. Pr'. Underneath is a 'YouKu fallback URL' field. A note below it says: 'Provide a YouKu fallback URL (accepts both http://v.youku.com/v_show/id_XOT1zNz40Dk2.html and <http://player.youku.com/player.php/sid/XOT1zNz40Dk2>)'. There are two expandable sections: 'URL REDIRECTS' and 'META TAGS'. In the 'META TAGS' section, the 'Autoplay' checkbox is checked and highlighted with a red box. At the bottom, there are 'Previous' and 'Save' buttons.

Points to remember

If you are adding a video to a Video highlight it is important to include some introduction text.

It is recommended that you add a video using the Media library and not as an iframe embed.

If an iframe is used, you will need to include a title attribute (title=" ") within the iframe code to make it accessible.
